Kyle Marco Cabiling

+639206013973 | kylemarcocabiling@gmail.com | kylemarcocabiling

SKILLS

FRONT-END DEVELOPMENT | ReactJS • NextJS • React Hooks • Redux • Redux Toolkit • JavaScript • TypeScript • Axios • Tailwind CSS • Storybook • HTML • CSS • React Testing Library • Jest • Formik • ESLint • TSLint • Prettier • Webpack
TOOLS & COLLABORATION | Jira • Redmine • Bitbucket • Git • GitHub • React Developer Tools • Redux DevTools • Browser Debugging Tools • Docker • WSL2 • Adobe XD • Figma • VSCode
SOFT SKILLS | Team Player • Deliver Results • Adaptability
AI | GitHub Copilot

EXPERIENCE

KPMG (RG Manabat & Co.)
Senior Frontend Developer | April 2026 – Present
Technologies: ReactJS, TypeScript, TanStack Query, Redux, Redux Toolkit, Tailwind CSS, Material UI, Jest, React Testing Library, Git, and GitHub Copilot

- Develop scalable, reusable, and maintainable frontend components using ReactJS, TypeScript, and modern frontend development practices.
- Build interactive and responsive user interfaces using functional components and React Hooks, translating business requirements into maintainable frontend solutions.
- Migrate a Lovable-generated prototype into the team's standardized project repository, aligning the implementation with established project architecture, coding conventions, and development standards.
- Create reusable AI prompts and custom skills to guide the conversion of AI-generated prototypes into production-aligned code, standardizing migration workflows and improving development consistency.
- Manage data fetching, caching, and asynchronous API interactions using TanStack Query to support efficient and reliable data management.
- Manage client-side application state using Redux and Redux Toolkit, ensuring predictable data flow and maintainable state management.
- Develop responsive and consistent user interfaces using Tailwind CSS and Material UI, following established design standards and business requirements.
- Write and maintain components and UI tests using Jest and React Testing Library to improve test coverage, application reliability, and code quality.
- Leverage GitHub Copilot and AI-assisted development workflows for code generation, refactoring, debugging, and test creation while maintaining established engineering standards.
- Collaborate with cross-functional team members to deliver maintainable frontend solutions aligned with project requirements and development best practices.

FELIX (ZZ Connect, Inc.)
Frontend Developer | July 2021 – March 2026
Technologies: ReactJS, TypeScript, Redux, Redux Toolkit, Tailwind CSS, Sass, Jest, React Testing Library, Git, and GitHub Copilot

- Developed scalable and reusable ReactJS UI components using functional components, React Hooks, Redux Toolkit, TypeScript, Tailwind CSS, and Sass to support business requirements and improve maintainability.

- Translated Figma designs into responsive, reusable UI components while maintaining consistency with design specifications.
- Collaborated with backend engineers, UI/UX designers, and product managers to develop, integrate, and deliver new features.
- Diagnosed and optimized web application performance using React Developer Tools (Components and Profiler), Redux DevTools, and browser debugging tools.
- Developed and maintained automated component and UI tests using Jest and React Testing Library.
- Conducted code reviews and deployed features to production, following established development practices.
- Identified and resolved NPM package security vulnerabilities to improve application security and dependency maintenance.
- Migrated data using Laravel and maintained legacy applications by troubleshooting and fixing CodeIgniter issues and bugs.
- Implemented user and panel management features by integrating REST APIs for retrieving, creating, updating, and deleting records (GET, POST, PATCH, and DELETE).
- Developed the Post Tender Request feature by integrating REST APIs for retrieving and submitting tender requests (GET and POST).
- Migrated the code repository to Semantic Versioning to establish a consistent and structured versioning strategy.

FUJITSU (WeServ Systems International, Inc.)
Application Systems Engineer | September 2017 – April 2021 | Cebu City, Philippines
Technologies: ReactJS, Redux, Redux-Thunk, Redux-Saga, Material UI, React Hooks, Jest, and VB.NET

- Developed scalable and reusable ReactJS pages and UI components aligned with business requirements using class components, functional components, and React Hooks.
- Converted Adobe XD designs into functional ReactJS UI components while maintaining consistency with design specifications.
- Optimized application performance and troubleshot UI issues using React Developer Tools, Redux DevTools, and browser debugging tools.
- Led a ReactJS project team, contributing to development, code reviews, testing, and knowledge transfer to team members.
- Participated in the creation and execution of program test cases to validate application functionality and quality.
- Performed reverse engineering of legacy VB.NET applications by analyzing existing code and translating implementation details into technical specifications.
- Contributed to the development of two ReactJS projects using different architectural approaches:
    - Project 1: Developed a ReactJS application using class components, Redux, and Redux-Thunk middleware; served as one of the team leaders.
    - Project 2: Contributed to a proof of concept (POC) using functional components, React Hooks, Redux, and Redux-Saga for state management and asynchronous operations.

EDUCATION

Visayas State University (VSU)
B.S., Computer Science
July 2017 | Baybay City, Leyte, Philippines

Kananga National High School (KNHS)
April 2013 | Kananga, Leyte, Philippines

COURSEWORK

Data Structure and Algo
Statistics
Algebra
Calculus
Thesis: Machine Learning

INTERESTS

Travelling • Fitness • Nutrition
